CONNECTION

By "Swede" Troedsson

In October, 2013, I received a telephone call from a woman who identified herself as Marian Spenser, who lived on Vashon Island, WA. She said her hobby was genealogy. Towards the end of the phone conversation, Marian asked me if I was aware I had a half-sister that lived on Vashon Island. Her name is Mary Lou Rowher. I was stunned!

About two years earlier she attended a local genealogy seminar. At that seminar she met a woman who was trying to find her birthmother. Marian took an interest in the woman's story, and volunteered to research the location of the woman's birthmother. Marian's genealogy skills persisted for two years, and resulted in closure for both Mary Lou and I.

When I was a teenager, my Dad told me that I had a half sister. He didn't know where she was. For over seventy years the questions kept haunting me. Was she still alive? If she was still alive, where did she live?

Marian gave me Mary Lou's telephone number. I immediately called her, and after a brief conversation, agreed to fly out to Seattle the next week to meet her. I was met at the Seattle airport by Mary Lou, her daughter and son-in-law, and Mary Lou's friend, who would transport us to Vashon Island. Mary Lou and I hit it right off. I spent four days on Vashon Island at Mary Lou's rental. During my stay, her daughter and son-in-law took us to lunch.

During my visit, Mary Lou, Marian (the genealogist) and I took the ferry to Tacoma. There we had an awesome seafood dinner at a fancy seafood restaurant (Anthony's), on my dime. It was a memorable dinner over which we shared our life experiences and how we found each other.

Marian said it was the most challenging and frustrating research she had ever done. By searching birth, marriage, death, military, and census records, ship passenger manifests, old newspapers, genealogy websites, and Google, she was able to slowly track my mother down. Part of the frustration was that my mother used nine different names (some were similar, but slightly different in spelling) when traveling.

My mother was born in Belgium in about 1910, and spent some time in Russia with her mother and stepfather. They fled Russia after the revolution, and traveled to China. She met and married her first husband in the Philippines.

Mary Lou was born in Pennsylvania in 1928. Mary Lou was just three years old when her parents divorced. Her Dad was awarded sole custody. (He later remarried, and his new wife helped raise Mary Lou). Mary Lou's birthmother vanished from her life after the divorce.

Mary Lou's birthmother met my Dad in China in 1933,

Mary Lou & Swede

where they were married. She and my Dad returned to New York, where I was born in 1933. In 1937, my Mother took me to Mexico, where she and I lived for over a year. My Dad came to Mexico and took me back to the U.S.. My parents lived separately until my Dad retired in Florida with my Mother. Both died there. Both of their death certificates list me as their son, living in Dillon, MT. BINGO! Marian was able to find my telephone number in an old Dillon phone directory, and the rest is history. (Mary Lou died of dementia in 2019).

Later, at my request, Marian submitted a two page detailed report about her genealogical search to the Beaverhead Headhunters Genealogical Society. It was published in their December, 2013 newsletter.

NEW* Montana Department of Commerce, Emergency Housing Assistance Program

The Emergency Housing Assistance program will provide rent, security deposit, mortgage payment, and/ or hazard insurance assistance as-needed for Montanans who have lost a job or substantial income loss as a result of COVID-19. Initial payments may include up to three months assistance where the eligible household can demonstrate arrears for April and May, with continual inability to make their June payment. Montana Housing will pay the difference between 30 percent of the household's current gross monthly income and their eligible housing assistance costs, up to \$2,000 a month. Household income limits range from \$75,000-\$125,000 based on family size. Montanans receiving other forms of housing assistance are not eligible. Total funding available is \$50 million.

Beaverhead Chamber of Commerce & Agriculture monthly board meeting

The Beaverhead Chamber of Commerce & Agriculture will hold their monthly board meeting on Thursday May 14th at 7:30 AM at the Klondike. These meetings are open to the public. We are following all local and state guidelines for holding public meetings. Please social distance and wear your mask when out in public. For information call 406-683-5511 or email info@beaverheadchamber.org

National Trails Day Saturday, June 6 10:00-12:00pm

The Montana State Parks and Bannack State Park announced today that they will be hosting a guided hike for National Trails Day at Beaverhead Rock State Park on Saturday, June 6th from 10am-12pm.

This year, the staff of Bannack State Park is going to host a hike at Beaverhead Rock. The guided hike will consist of a one hour walk through the state park examining the flora, fauna, and history of the area.

To adhere to social distancing, the hike will be capped at ten people, so please call ahead to reserve your spot.

The moderate hike will be a fun way to get outside and learn more about local parks. There is a strong chance for warm temperatures. Sunscreen, water, sturdy walking/hiking shoes, and appropriate hiking gear are suggested for the day.

To access Beaverhead Park, the turn-off on Highway 41 has no marker. Your phone's maps will take you close to the park, but the turnoff is a dirt road just after the curve marked to slow down if you are coming from Dillon.

To Reserve Your Spot Contact:

Siobhan Warner
Americorps Member - Bannack State Park

Annual Drinking Water Quality Report

City of Dillon
PWSID#MT0000201
125 North Idaho Street
Dillon, MT 59725

We're very pleased to provide you with this year's Annual Quality Water Report. We want to keep you informed about the excellent water and services we have delivered to you over the past year. Our goal is and always has been, to provide to you a safe and dependable supply of drinking water. Our water source is ground water from 4 wells. At the present time, we serve 4300 people. We have completed a source water protection plan that provides more information such as potential sources of contamination to our drinking water supply. This plan can be found online at [http://apps.msl.mt.gov/Geographic Information/Data/SourceWaterProtectionProgram/](http://apps.msl.mt.gov/Geographic%20Information/Data/SourceWaterProtectionProgram/)

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline (800-426-4791).

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present include:

Microbial contaminants, such as viruses and bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife;

Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming;

Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses;

Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems;

Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

We're pleased to report that our drinking water is safe and meets federal and state requirements.

If you have any questions about this report or concerning your water, please contact Mayor Michael Klakken, Todd Hazelbaker, Director of Operations, or Jason Johnson, Utility Supervisor. They can be reached at 683-4245. You may also attend our meetings. They are held on the first and third Wednesday of each month at City Hall at 7:00 pm.

The City of Dillon routinely monitors for constituents in your drinking water according to Federal and State laws. The following table shows the results of any detects in our monitoring for the period of January 1st to December 31st, 2019. For constituents that are not monitored yearly, we have reviewed our records back the last five years.

We have monitored for lead and copper, and all of our samples have been in compliance with the Lead and Copper Rule. If present, elevated levels of lead can cause serious health problems, especially for pregnant

women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Dillon is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

Parameter	Date	90th % value	Units	Action level	Source of Contamination
Lead	2018	2	ppb	15	Household plumbing
Copper	2018	0.55	ppm	1.3	Household plumbing

8In the tables above and below you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Parts per billion (ppb) or Micrograms per liter (ug/l) - one part per billion corresponds to one minute in 2000 years or a single penny in \$10,000,000.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Action Level - the concentration of a contaminant which if exceeded, triggers treatment or other requirements which a water system must follow.

Treatment Technique (TT) - (mandatory language) a treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

Maximum Contaminant Level - (mandatory language) The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal - (mandatory language) The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Picocuries per liter (pCi/L) - Picocuries per liter is a measure of the radioactivity in water.

MCL's are set at very stringent levels. To understand the possible health effects described for many regulated constituents, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Disinfection By-products								
Total Trihalomethanes (TTHM)	N	2019	9.9	na	ppb	0	80	By-product of drinking water chlorination
Haloacetic Acids (HAAs)	N	2019	4.1	na	ppb	0	60	By-product of drinking water chlorination

While your drinking water meets EPA's standard for arsenic, it does contain low levels of arsenic. EPA's standard balances the current understanding of arsenic's possible health effects against the costs of removing arsenic from drinking water. EPA continues to research the health effects of low levels of arsenic, which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems.

Our system had no violations.

We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected. The EPA has determined that your water IS SAFE at these levels.

We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

The report will not be mailed to our individual water customers. Copies of this report are available upon request at the City Hall.
